Service Overview

The ECLIPSE 0-19 solution provides a digital and mobile platform that supports staff providing pre-natal, child development and school nursing services from 0-19 years of age. ECLIPSE enables staff to deliver a coherent and effective experience for children and young people aged 0-19.

0-19 teams focus their efforts around important stages in a child's life to improve health outcomes.

Service Description

ECLIPSE software for 0-19 services will help to deliver better patient care. As per the Government's Cloud First policy, ECLIPSE is a cloud native SAAS based solution. The software is able to work on any device and is able to be tailored to the exact requirements of any 0-19 service.

ECLIPSE mobile working ensures that the number of visits to the 0-19 service can be increased. The software offers the ability for multidisciplinary teams to work together to provide a secure system.

Use of the software will not only enhance efficiency, but also the quality and availability of information provided. The data is accurate and upto date. This is enhanced through multi-agency access, whereby all frontline services that have contact with the individual can add thoughts and observations.

Through collaboration and interoperability, you will have a complete holistic view of children and young people. Details such as the relationship with family, friends, police and school can be added to the system. This has an impact on the quality of information and reduces the possibilities of data error or duplication. All of which saves time and keeps the team upto date on each service user's circumstances.

A multi-disciplinary team each have a unique login with a personalised screen based on their tasks and workflows. Data entry is much easier, and it provides the ability to record in new ways.

The team is no longer confined to the office when updating notes or locating information. Instead team members can work from anywhere at any time, from any place; writing notes directly into ECLIPSE while with the individual, or from the office, the car, anywhere. This added flexibility will free up staff time, allowing them to spend more time on the frontline with children and young people.
