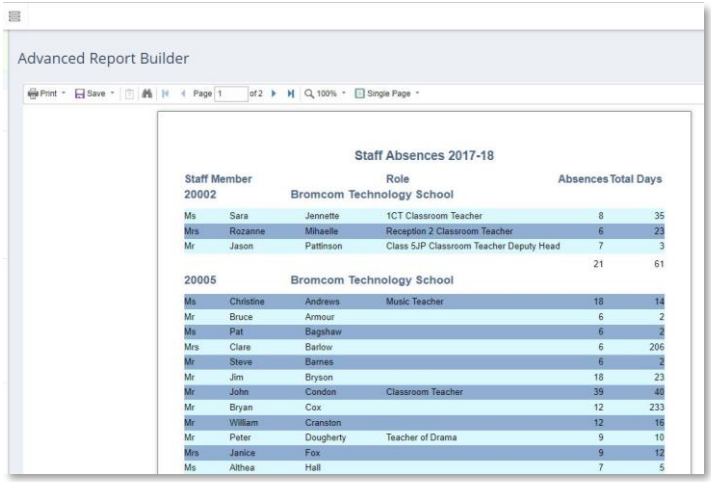
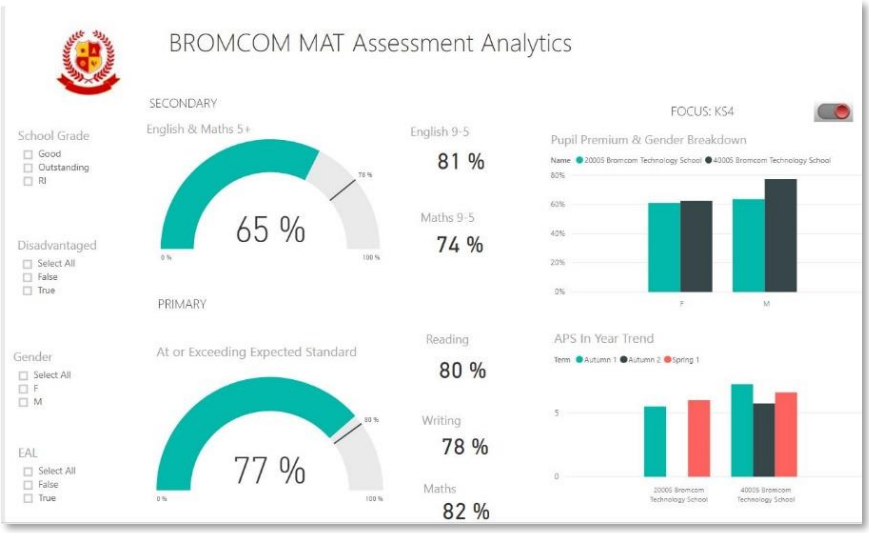
Your Authority – Your KPIs

With Vision you can track performance and policy across all your schools. Fully customisable advanced reports and dashboards show the measures that matter to you.

- Create reports with grouping, charts and summary calculations
- Rich data set includes pupil attendance, conduct and attainment as well as staff characteristics and absences.





- Embed dashboards made with commercial BI software
- Report in real time on performance in all schools or key groups
- Set benchmarks based on highest performing schools in the authority

"The Bromcom team is very quick to develop our requirements"

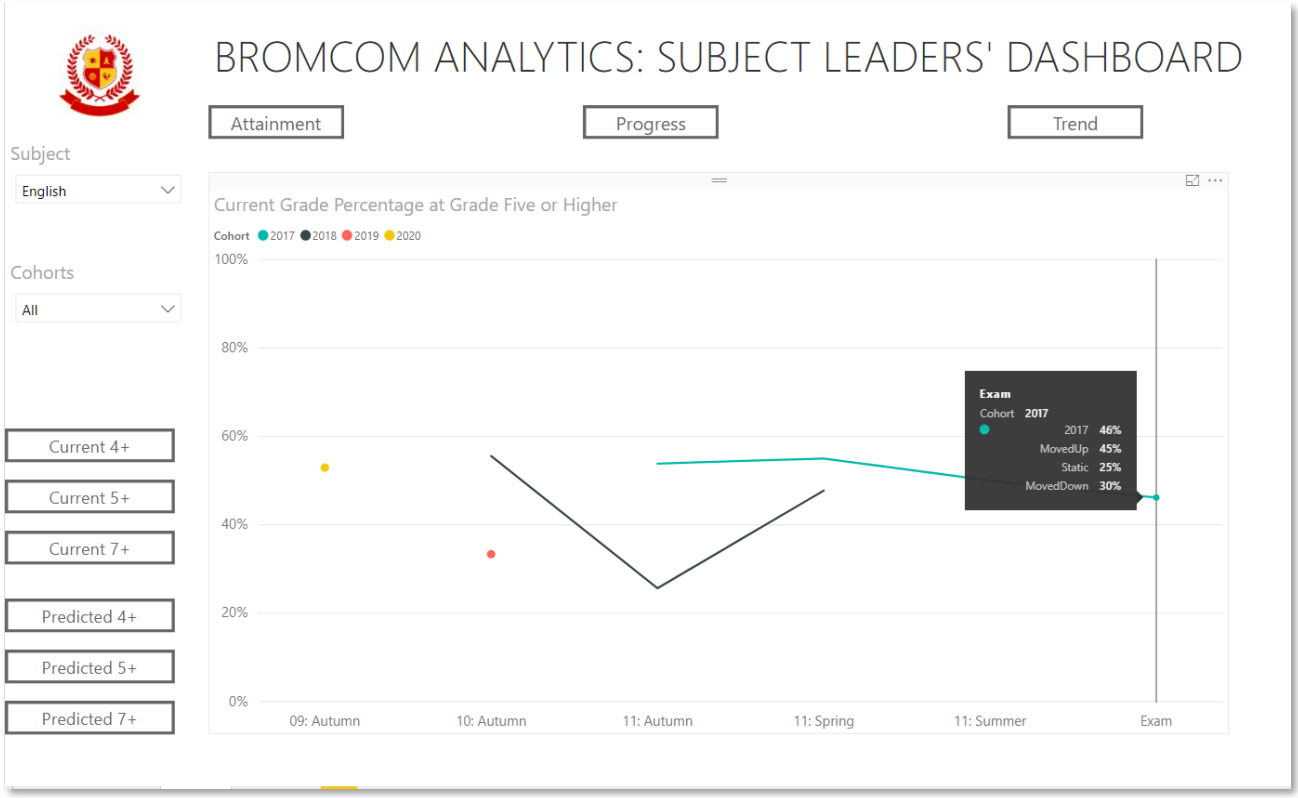
Linda Stolic, Deputy Head, St Peter's Primary School

Bromcom Computers PLC

Bromcom has more than 25 years' experience providing innovative, leading edge and award winning IT solutions to schools, academies and local authorities that demand more from their information systems. Keenly aware that schools are continually asked to do more with less, our focus is on delivering all the functionality schools need via a web browser, improving efficiency and saving our clients money on physical infrastructure and third party applications.

We strive for excellence in all areas of our users' experience from our cutting edge design and capability, which is continually enhanced thanks to dialogue with our customers, to our UK call centre that resolves over two thirds of support issues at first contact.

Bromcom's mission is to help schools efficiently collect data and to close the gap between collecting data and using it effectively to inform those working with the pupils and increase engagement with all stakeholders. With tailored dashboards, data analysis, powerful reporting, integration with office productivity tools and access for third party integration, Bromcom Vision is a powerful and flexible tool for meeting the unique challenges of your Local Authority.



Service Overview

Vision is a web-based portal, accessible anywhere via web browser with no need to download or install software. Data flow into Vision is automatic so does not require manual intervention or maintenance. Access levels, however, are fully customisable to ensure specific user groups only see the data relevant to them.

Vision aggregates data in four main areas, student attendance, conduct (positive and negative behaviour incidents and exclusions), attainment and staff characteristics and attendance. Data drawn from these areas of each individual school MIS can be compared at the school level and broken down further by contextual factors such as gender, ethnicity and eligibility for the Pupil Premium.

The Breakdown tool allows instant comparison of school performance via graphs and tables, where each graph can be customised as to specific characteristics and the date range covered. Filters are not restricted to a single data item so a graph could show, for example, the attendance of boys eligible for FSM last term. It could then be modified to contrast that with the same group's attendance this term.

Vision includes Advanced Report Builder which allows users to create their own reports on multiple aspects of performance. Advanced Reports can have multiple, separately filtered, sections; can group and summarise data and deploy a wide range of calculations, both within data sets and as floating variables.

In addition to the reporting capabilities of the system, it is also possible to query the dataset using commercial business intelligence software such as Tableau or MS Power BI. Dashboards created this way can be embedded into Vision and provide an interactive platform for dissecting the performance at high performing schools or departments. These areas of excellence can then be used to set benchmarks for the authority as a whole.

In addition to providing advanced reporting and dashboards for LA Level reporting, Vision purchase comes with Advanced Report Designer for the LA team and the facility for member schools to run advanced reports and embed BI dashboards.

Groups of pupils that may be too small to be statistically significant in single schools can become so when analysis is done across the authority and by providing a deeper understanding of pupil context and what is possible, Vision connects day-to-day practice at the classroom level to the authority's long term, strategic objectives.

Training

Training in LA Vision is available as a half day 'Vision Co-Ordinator' course from our expert customer service team. The course covers all technical aspects of the system, including both its use to interpret data and the management of users and their access levels. Training is accompanied by supporting Quick Start Guide documentation, training videos and practice logins on a training school Cloud MIS account. The Service also provides on-line help, which also links to quick help videos.

Training on Advanced Report Builder and embedding BI dashboards is available separately as half day 'Advanced Report Developer' and 'BI Dashboard Developer' courses, with accompanying support videos and documentation.

Ordering and invoicing process

Phone: 020 8290 7171
Email: sales@bromcom.com
Fax: 020 8290 7199
Post: G Cloud Sales Bromcom Computers Plc Prospect House 19-21 Homesdale Road Bromley BR2 9LY

You should complete the Bromcom G Cloud Order Form which includes the following information that Bromcom needs to know:

o LA number
o Establishment number
o Postal address
o Official order number
o Order Date
o Name of contact who will coordinate on-boarding activities
o Name of contact for invoice and address details if not as above
o Names and Phases of establishments being linked to Vision
o Number of pupils on roll in each establishment at the most recent School Census. For newly opened and proposed to open establishments and those with a growing pupil population, please instead provide the total pupil number estimated for the end of the academic year in which you intend to 'go live'
o Required initial contract length[1]

The Bromcom G Cloud Order Form template is available from Bromcom via the email address or other contact details given above. Customers can speak with a Bromcom sales representative to discuss any aspect of the order form and to confirm pricing or other details and can then place their order, using the Bromcom G Cloud Order Form. Your order may include software as a service, other G Cloud services and bookings (e.g. reserved places on training dates) and it is therefore vital to ensure a written order is supplied to Bromcom.

The Customer will receive an invoice following receipt of the order. For any additional services such as further training sessions, a further call off Bromcom G Cloud Order Form must be sent and a further invoice will be sent following the request.

[1] At the end of the initial contract period, the ordered services will be automatically renewed unless cancelled or changed by the Customer.
