## Homelessness, Prevention and Advice using Locata Pro's HPA2 System Pricing Document

The Housing Options Allocation service is offered in its vanilla state as described in the service definition document as a fully hosted, fully maintained web accessible service at £8,000 / annum, with a minimum of a 2-year contract with two options to extend by one year.

For simplicities sake, where the system provides back office administrative functions, we include licensing for up to 100 concurrent users within the customer organisations. Where there is an interface used by the general public, we do not restrict the number of users of this interface.

While the vanilla system can be readily implemented and should meet all of your primary requirements, as defined in the on boarding section of the service definition document, there are optional implementation services such as data migration, website customisation etc., which are available to clients who desire a richer or more tailored solution.

This additional configuration is for all software quotes where there are additional requirements above and beyond the service defined within the service definition document, the costs for this work will start at £5,000. Locata Housing Services charges a standard day rate of £750 plus VAT for consultancy.
