Unlimited Templates

Create unlimited document templates which are reusable and allow for rapid document sending. Saving the workflow, type and location of field placements reduces the document preparation time and allows for the automation of your business processes.

Multi Language Application

Request a recipient's e-signature in one of 9 languages improving the customer experience for your international clients. Send a business document from Germany to Malaysia, to be signed in the native language and close the deal in a matter of minutes and with global time zone support, your document is completed and converted to the local time zone.

Digital Signature Certificate

Every completed document is supported with a digital certificate documenting the author, signers, devices used, IP addresses, time and date stamps and much more.

SMS Two-Factor Authentication

Signers receive a one-time passcode via SMS that they must enter before they are allowed access to the documents.

E-Sign iD-Checker

E-Sign iD-Checker is integrated into the E-Sign platform and users running the check have to have an E-Sign account. They can run a check without the requirement to sign documents. Personal details are screened against a host of positive and negative datasets from a global ID database allowing you to verify clients to eliminate the risk of fraud. This is achieved by checking: 1) UK and International passports, 2) GB Driving Licenses, 3) Mortality register, 4) UK credit header, 5) Age & 6) Address checks.

Secure Document Storage

E-Sign has its own state-of-the-art servers within the UK and Isle of Man, with enhanced physical and digital security in place. We operate with server-side encryption (SSE), which encrypts the data at rest, twin firewalls protecting our database with a 24/7 monitoring system in place. E-Sign operates an encrypted client library for end-to-end encryption that cannot be reversed once a document has been passed through it. To access these documents, there are identity and Access Management policies within the infrastructure, that only allow access to documents or any other data to the user and those they send access to.

Advanced Audit Trail

Track and record your document transaction through every stage. All data is locked and retrievable from the advanced audit trail produced for every document sent within E-Sign.

Unlimited Uploads

Upload as many business documents you require into your E-Sign account to send to your customers.

Email Personalisation

Reflect your company branding in the outgoing emails so your recipients know they are completing documents sent from you. Add your logo, email signature and customise the the email https://www.e-sign.co.uk.

Full Form Functionality

E-Sign offers versatile form functionality including text fields, radio buttons and checkboxes to allow our users to adapt E-Sign to fit their business documents. Dynamic field placement allows the user to place fields anywhere they require on their document.

Free full-featured 14 day trial

Try us for 14 days. No payment details required.

Start Trial
