About LoGov

LoGov is a Community Interest Company with a mission to help local councils deliver great digital services to every citizen.

All of our digital services sit on the LoGov Platform - a resilient, cloud based collection of reusable and connected digital service components.

Each new service is commissioned by a pioneering council and created according to the GDS Service Standard with support from LoGov's team of digital experts.

The service is then licensed to other councils with a percentage of the license fee going back to the original council.

The rest is reinvested into the development of the platform.
