

IBM Multinetwork WAN Services (MWS)

Pricing Document

Pricing Document

Pricing Overview

Service programs and prices are individually calculated to specific client requirements, and can be flexed up and down as requirements change. Pricing will depend complexity and the level of service required.

The prices given on the G-Cloud 10 portal are based on IBM rate card prices. Please refer to the skills framework for the information age section for more detail.

The prices given are non-binding indicative prices. The preliminary pricing quoted is for reference only. It has been derived from assumptions made according to IBM's extensive experience providing this service and does not represent a commitment by IBM. A formal proposal will be prepared at the client's request. A formal study of the client's current operations is required before a formal price can be released. IBM Multinetwork WAN offerings are priced individually for each client's unique and changing infrastructure. That price may be higher or lower than the estimate presented here.
