

Best-in-class Cloud-PACS for... archiving, viewing, reporting, integrating and sharing.

Streamline your workflows. Increase your bottom line.
Improve patient care.

INCREASE EFFICIENCY WITH CLOUD-BASED IMAGE MANAGEMENT

At Cimar, we make it simple to upload studies into your own secure cloud archive, whether you are a fixed premises practice or a mobile service. No specialised hardware is required. Once in the cloud, studies can be seamlessly shared with referrers, medical professionals and patients. The results: faster turnaround of studies, a reduction of manual effort for you and your referrers, and a better experience for patients.

ELIMINATE RISK WITH UK COMPLIANT, SECURE CLOUD ARCHIVING

There is inherent risk in relying on legacy PACS archives with clunky, outdated, uncompliant storage. Our managed and secure cloud provides low cost, extremely secure study archiving via our UK Cloud hosted data centre in England. Cimar eliminates risk of data loss and keeps your studies stored and fully auditable.

VIEW AND REPORT STUDIES FROM ANYWHERE

The Cimar zero-footprint diagnostic viewer is FDA approved for reporting. Combined with our powerful reporting suite (including customisable templates and VR compatibility), Cimar becomes your all-in-one reporting and review platform. Authorised users can access patient images from any PC, Mac, or tablet, make annotations, compare images, and more.

CONSOLIDATE MULTIPLE IMAGE SYSTEMS WITH CLOUD PACS

A cloud PACS shares many similarities with a traditional PACS, but with one key benefit, Cimar remotely takes care of the systems IT, deployment, support, free upgrades and updates, allowing you to focus solely on patient care. With a predictable SaaS subscription, there are no hidden or surprise costs often associated with a traditional PACS.

And integration and connection to other systems and modalities is easy...
