1. Scope of our services

Overview

This document describes Amberjack's Cloud Services and should be read in conjunction with the associated Government Cloud Services documentation.

Amberjack's in-depth industry knowledge combined with our extensive implementation experience for the delivery of enterprise cloud computing solutions ensure that you benefit from all the skills and experience you need for a successful SaaS implementation. Amberjack technology has led the intake-based volume recruitment industry for almost twenty years and is field proven in the most regulated businesses and sectors in the world.

Amberjack provides Cloud Services, which include:

Strategy: We can help you define a transition strategy to Amberjack services. This can include, but is not limited to, development of business cases that illicit the benefits of using our technology, Total Cost of Ownership (TCO) analysis, development of strategic roadmaps that spell out the initiatives needed to close the gaps between the current state and end state definition.

Implementation: We provide the resources to help you, configure, set-up our technologies in the context of your existing application environment and business landscape. This includes support for data migration from existing CRM, recruiting, onboarding or learning applications (if applicable). Our implementation services are easily accessible. You can use implementation on a standalone basis or as part of larger enterprise transformation or technology integration projects or initiatives.

Governance and Operating Model Definition. In partnership with you we'll support process development and definition for you to maximise your investment in Amberjack cloud solutions. This will ensure that all governance, controls and roles are established and defined to support a successful implementation and ensure usage is optimised.

Amberjack is leading the SaaS volume and intake-based recruitment space. Trusted by the largest professional service firms and the biggest brands in the world, Amberjack technology is proven in the most regulated sectors through seamless integration with leading assessment providers and enterprise technology. With multiple complex global rollouts completed successfully and many large rollouts for a mixture of single country and multi-country clients, Amberjack offers the ideal combination of local coverage and global scope having managed over 450 of the world's most high profile and complex volume recruitment campaigns in over 60 countries.

2. Approach

Amberjack can provide any of our cloud services individually or in combination with the Ambertrack Applicant Tracking System. We work consultatively to discover our client's objectives and business problems that need solving and scope out a configuration design and implementation plan that meets these objectives. At all stages we collaborate with clients to ensure we maintain pace and direction.

Amberjack's cloud services are highly configurable and pluggable, resulting in a system that looks and feels unique for each client and their respective candidates. This level of flexibility demands a well-structured implementation model that creates and maintains absolute clarity throughout the implementation period. However, adjustments to scope are welcomed, through a flexible but rigorous change management process so that the end result is right first time and provides maximum value and impact.

	Discovery Ensuring we understand the business problems and strategic goals of the client.	Scoping High level scope of work to ensure mutual understanding and agreement.	Implementation Iterative development of configuration, testing and release in partnership with the client taking into consideration the parallel development of assessment services and ensuring dependencies are recognised and managed.	UAT Final testing and sign off of the solution.	 amberjack
Assessment Development					Development and implementation of the assessment model.
System Configuration					Implementation of the technology platform to support the assessment model.
API Integration					Implementation of API integrations with third party organisations where required.
	Contractual Compliance				

This level of controlled pace and flexibility demands expert people. We have a team of highly skilled engineers, assessment designers, client partners and project managers who are available to manage every stage and help with everything from making key design decisions around process flow to branding and assessment benchmarking.

3. Assets and tools

Given the high level of configurability, knowing where to start can be difficult. So Amberjack has a number of baseline configurations that clients can use as a starting point to build up a feature rich experience for their candidates.

All our products are designed using secure development principles and by default are penetration tested annually to ensure we maintain high standards of security. In addition, all our products are hosted in high availability, high performing data centres that can scale as usage demand increases. Maintenance releases are designed to minimise downtime and changes are planned outside of peak usage hours. At all times we have the candidate and client experience front and centre of our minds.

Ambertrack

- Enterprise Applicant Tracking System (ATS)
- Features include customisation, automation, bulk processing, blind screening, real-time reporting, self-service booking, interactive account areas, In-built personalised automated feedback, Net Promoter Scores (NPS).

We do what's right for our clients and their candidates. We don't know any other way. www.weareamberjack.com

Immersive candidate assessment

Leap is an immersive digital assessment platform that makes assessment and selection more efficient, effective and engaging than ever before. It combines the latest innovative tech with robust insights-based assessment and selection tests that deliver the quality talent you need. Leap flexibly hosts a wide range of automated assessment tests. From traditional text-based assessments of aptitude, cognition, judgement and personality to blended assessments, cutting-edge immersive video Situational Judgement Tests (SJTs) and interactive Match-Me tools that engage candidates more effectively.

The screenshot displays a digital assessment interface. At the top, it indicates '1 of 14' questions. The scenario text reads: 'You're in an urgent meeting with the rest of your project team discussing some important steps for the next stage of the project you're working on. The meeting is running late, due to technical issues at the beginning. You have a one-to-one meeting with your manager in ten minutes but you know that there are still several points to be discussed in the project meeting and it's definitely going to run beyond the scheduled meeting time. What do you do?'. Below the text is a table for selecting responses. The table has two columns: 'Most' and 'Least'. The first response, 'Message your manager and ask if you can reschedule or delay your one-to-one meeting to another time so you can finish the project meeting.', is marked as the 'Most' appropriate response with a green checkmark. The second response, 'Try to move through the discussion points quickly and hope the meeting will finish on time ready for your one-to-one meeting.', is marked as the 'Least' appropriate response with a red X. The other two responses are marked with empty circles. A 'Next' button is visible at the bottom right.

Response	Most	Least
Message your manager and ask if you can reschedule or delay your one-to-one meeting to another time so you can finish the project meeting.	<input checked="" type="radio"/>	<input type="radio"/>
Try to move through the discussion points quickly and hope the meeting will finish on time ready for your one-to-one meeting.	<input type="radio"/>	<input checked="" type="radio"/>
Ask the project team to focus only on the important points and if time runs out schedule a follow up meeting on the less important points.	<input type="radio"/>	<input type="radio"/>
Stay to the end of the meeting and apologise to your manager for being late; they will understand that the project meeting was urgent.	<input type="radio"/>	<input type="radio"/>

"Leap delivers a branded experience that's fully immersive to efficiently assess the talent we need."

Recruitment Manager, Financial Services Firm

Make better hiring decisions. Faster.

Trusted by the largest professional service firms and the biggest brands in the world, Leap delivers a world-class candidate experience that not only improves quality of hire but drives retention. Assessments can be delivered as individual tests or blended together to form a single video-immersive assessment stage in a variety of media.

Behavioural assessments identify the potential to succeed in role and sift out candidates who are not suitable by presenting realistic job previews.

Traditional cognitive assessments reveal reasoning, logic, numeracy, job specific competencies and ability to accurately predict potential for success.

Blended assessment measures multiple qualities from a candidate, including behavioural, cognitive and ability areas. Regardless of the approach selected, all assessments seamlessly integrate with your existing recruitment process to help you make better hiring decisions, faster.

Unrivalled candidate experience

Harness the potential in your selection process.

As an immersive platform Leap is born to deliver the world class consumer experience that candidates demand today. Responsive design means that an optimal experience is guaranteed across all devices for all tests. In-built personalised automated feedback helps meet the instant demand of feedback hungry candidates by explaining what they did well and where they can improve. Also, by measuring the experience of candidates with Net Promoter Scores (NPS) engagement is benchmarked as a process of continual improvement. Leap not only empowers your employer brand but better supports our candidates at every step of their journey.

A screenshot of the Leap assessment interface on a tablet. It shows a question about a meeting scenario with four possible responses. The first response is marked as the 'Most' correct with a green checkmark, while the others are marked as 'Least' correct with red X's.
