

Lightscope pricing details – GCloud 11

The Lightscope platform is designed to scale for any sized organisation and our pricing is based on volume of suppliers within the supply chain. Our objective is for smaller operations to have access to the same enterprise quality analytics and insight.

We have three basic tiers and will configure the system based on the user requirements and the analytic modules required.

Our starting price is £9000 for small finance & procurement functions, our standard implementation is £18000 and enterprise implementations, where a complex supply chain exists, starts from £26000.

We'd encourage you to engage with us and discuss your specific needs, as we can deliver extended functionality within the proposed pricing bands that covers additional analytic modules e.g. duplicate invoice algorithms, travel spend analytics, expenses analytics. We'll work with you to develop your procurement operating model and can provide extensive support in the form of templates, requirement document accelerators and strategic roadmap development.

Tier	Users	Data Load Frequency	Supplier Volume (indicative)	Price
Small	1	Daily, Monthly or Quarterly	<1000	£9 – 12k / year
Standard	Up to 5	Daily, Monthly or Quarterly	<3000	£18 – 26k / year
Enterprise	5 or more	Daily, Monthly or Quarterly	>3000	£26k+ / year
