Licensing (G-Cloud Sales)

The AssessNET Safety Management System comprises three pricing components-

- User licencing
- Module licencing
- Professional Services

In relation to Systems users versus non system users, you will need to determine the number of users who will require a system licence. The best way to assess this, will be based on how many members of the organisation will be required to manage tasks and activities, as these users will require access to Task Manager, which in turn requires a user licence.

Core Management System costs start from £7195. This includes as standard, 100 System User licences along with one day technical and training support.

Additional modules can be added at any time at a cost of £3899. This includes one day of relevant module training.

For the Education Sector, we provide discounts. Should you wish to know more, please contact one of our team, who would be delighted to discuss this with you.

Professional Services

In addition to the license costs, Professional Services are applicable to ensure our solution is configured, tailored and managed to completely fit your organisational objectives. It is important with any management solution that you get the support you require and continue to do so year on year as your organisation grows and AssessNET's penetration maximises.

Should you find that you require additional services, please discuss this with one of our Account Executives – the indicative day costs are set out below

Service	Cost*
Project Scoping (System / Development)	£1000
