### What is WorldDEM™?

WorldDEM is a 12m Digital Surface Model (DSM) with unprecedented quality, accuracy and coverage. WorldDEM provides a reliable and precise reference layer to enhance a wide range of applications.

### What is WorldDEM4Ortho?

WorldDEM4Ortho is a 24m elevation information layer optimised for the orthorectification of high-resolution (HR) and very high resolution (VHR) optical satellite imagery. WorldDEM4Ortho is the most consistent, homogenous and accurate elevation model for high-quality image orthorectification on a global scale.

### WorldDEM Streaming Terms & Conditions
