## SERVICE OVERVIEW

IQVIA Vision supports the implementation of Population Health Management within an Integrated Care setting to help NHS organisations fulfil the vision outlined in the NHS Long Term Plan.

Enabling the safe collection, curation and integration of data from multiple care settings into a secure UK-cloud environment, IQVIA Vision provides a set of analytical tools to help Health and Social care organisations to, for example:

- Understand the dynamics of their population in terms of demographics and disease at multiple levels, from region to GP Practice.
- Stratify patients at risk of (but not limited to) frailty, developing a disease e.g. Type 2 Diabetes and/or high resource utilisation e.g. readmissions.
- Predicting 'rising risk' patients; those most likely to become high resource users, enabling intervention planning and reducing likelihood of admission/re-admission improving patient experience and outcomes.
- Support PLACE boards in mapping of patient pathways and understand impact of interventions (scenario modelling) on care provision.
- Help PCNs understand the impact of patients with multi-morbidities on health and social care services.
- Identify inequalities in provision of care.
- Monitor changes to care provision on Patient Experience and Outcomes (PREMS and PROMS) to validate and establish best practice.
- Utilize predictive analytics (Artificial Intelligence) to support case finding e.g. rare diseases.
- Identify patient cohorts for involvement in academic health research projects.

IQVIA Vision is compliant with General Data Protection Regulation (GDPR) and complies with the NHS Internet-First agenda.

With global experience in delivering analytical solutions to Healthcare organisations, IQVIA Vision provides the tools to support the successful delivery of Population Health.

## Service Features

- Secure multi-sector data collection
- Population segmentation
- Risk stratification
- Case finding e.g. rare diseases
- Predictive analytics (Artificial Intelligence including Machine Learning and Natural Language Processing)
- Patient Experience (PREMS) and Outcomes (PROMS) analytics
- Secure hosted dashboard/analytics platform
- Self-service analytics
- Analytical consultancy expertise e.g. data translators
- High performance, scalability
- Cloud or on premise
- UK

## Service Benefits

- Optimise decision making through actionable insights
- Manage risk
- Identify benefits of and opportunities for early interventions
- Support multi-sector collaboration
- Patient-centric view (PREMS and PROMS)
- Flexible whole-system analysis
- Support for service planning, 'What If' analysis
- Support self-management initiatives
- Identify best-practice care pathways
- Safely link datasets without revealing patient identities
