Managed SD-WAN

Cisco Meraki products are now used in over 2 million networks worldwide. You'll find them in restaurants, cafes, hospitals, retail sites and hotel rooms.

If you are managing a multi-site business, robust and secure connectivity infrastructure is ever more vital for underpinning business-critical applications, employee productivity and communications. As a strategic asset, business WAN capability is a key driver and enabler for profitable growth.

Timico's Managed SD-WAN, powered by Meraki, is perfect for businesses who are looking to transition from legacy WAN solutions and need the benefits of quality of service, visibility and link aggregation as a fully managed service.

While Cisco Meraki has made establishing SD-WAN easier, faster and smarter, an SD-WAN solution includes a complex set of moving parts. Managing the day to day running of an SD-WAN solution can be challenging for many organisations. Timico's Managed SD-WAN service is designed to eliminate those management challenges for your business.

Timico Managed SD-WAN leverages our expertise and technology to optimise your WAN connectivity; constantly monitoring connections to automatically choose the optimal path available for the type of traffic and applications on your network and the business priorities you set.

Working with you to build the best solution

Our solutions are built around standard blueprint reference architectures which are vendor accredited and proven in the field. Timico Solution Consultants will work with you to understand your requirements and scope your business needs, so we can fully support you and your solution. We offer advice and guidance ensuring the deployment of your SD-WAN solution covers both your current and anticipated business needs.

Key features and benefits

- **One point of contact – so you can focus on your business priorities**

  Single, consolidated OPEX-based contract for covering the provision, management and support of everything you need for your SD-WAN and Internet connectivity (hardware, software, licensing, 24/7/365 support). Managed migration with a smooth transition from your existing infrastructure.

- **A fully managed service**

  Consistent, SLA-backed fully managed service, including proactive monitoring, incident management, change management and alerts; giving you the assurance of defined response and resolution times.

- **Built-in advanced security management to keep your business safe**

  Timico SD-WAN solutions leverage integrated next-generation security capabilities to ensure the safe and compliant management of data and enforcement of security policies.

- **Agility to adapt as your business grows**

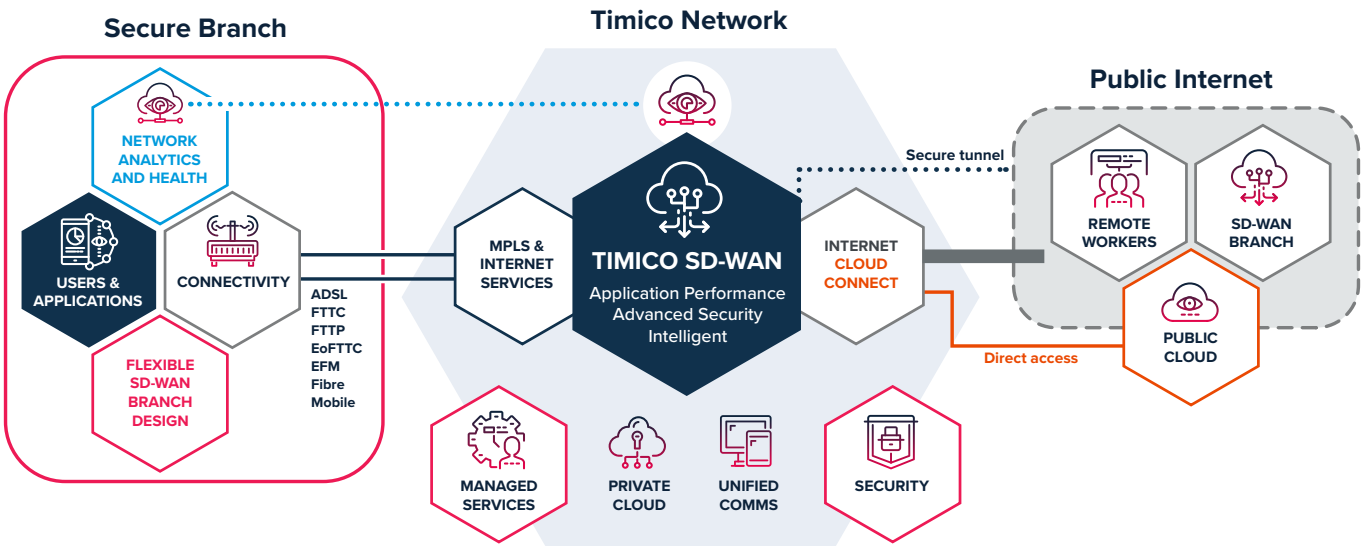
  Centrally orchestrated bandwidth, routing, application steering and security polices across a variety of data transport, including xDSL, FTTx, DIA, MPLS and LTE with a single intuitive workflow. This ensures all business-critical applications can be prioritised with minimal requirements for intervention by your network teams.

- **Expert design and management teams**

  Our team of experts create standardised network designs that reduce costs and enables agile management whilst providing end-to-end visibility, reliability, resilience and security.

- **High quality performance and intelligent use of technology**

  Dynamic policy and performance-based path selection with automatic load balancing means you benefit from maximum network performance, reliability and resilience, ensuring optimised access to your multi-cloud applications.



Timico's Managed SD-WAN enables your business success, through the intelligent use of technology, with the resilience you require.
