YOUR DATA. **OUR MISSION.**

Our unified data security platform is engineered from the ground up to protect your data from insider threats and cyberattacks.

Prevent Data Breaches

Detect and investigate anomalous behavior, privilege escalations, and unauthorized access to your core data stores: file servers, email systems, Active Directory.

Reduce Risk

Identify your most sensitive data, see where it's overexposed, track who can and does access it, and safely lock it down to a least privilege model.

Achieve Compliance

Demonstrate compliance with built-in reports and a searchable audit trail of data access and authorization process. Help meet requirements for GDPR, PCI-DSS, HIPAA, GLBA, SOX, and more.

Security Analytics with Deep Data Context

Varonis is a pioneer in data security and analytics, specializing in software for data security, governance, compliance, classification, and threat analytics.

Confidently answer the question “Is my data safe?” with continuous monitoring and alerting on your core data and systems. Varonis is the only solution that combines data classification and access governance with UEBA, giving our threat models richer context and more accurate alerts.

We protect your data wherever it lives.

Trusted by thousands of enterprises to **protect** their **sensitive data**

> Varonis works across the whole organization. It works with our infrastructure, our Active Directory, it works on all the hardware and software we have. It's allowed us to see what goes on – and see what's out there. We were able to detect and disable a ransomware infection within 10 minutes of an attack.

DATADVANTAGE
DATA AUDIT & PROTECTION

DatAdvantage maps who can (and who does) access data across file and email systems, shows where users have too much access, and safely automates changes to access control lists and groups.

Visualize risk, lock down sensitive data, and get full visibility and control across your on-premises and cloud-based data stores on a unified platform.

DATALERT
SECURITY ANALYTICS

DatAlert detects suspicious activity and prevents data breaches across platforms, visualizes risk, and prioritizes investigation.

VARONIS EDGE
PERIMETER TELEMETRY

Varonis Edge analyzes perimeter devices like DNS, VPN, and Web Proxy - applying blended context to activity and alerts in your core data stores.

AUTOMATION ENGINE
AUTOMATED REMEDIATION

The Automation Engine discovers undetected security gaps and automatically repairs them: fixing hidden security vulnerabilities like inconsistent ACLs and global access to sensitive data.

DATA TRANSPORT ENGINE
DATA RETENTION AND MIGRATION

Data Transport Engine automatically finds, moves, archives, quarantines, or deletes data based on content type, age, access activity, and more.

DATA CLASSIFICATION ENGINE
SENSITIVE CONTENT DISCOVERY

The Data Classification Engine discovers and identifies sensitive, regulated, & stale data with built-in patterns, predefined categories, customizable regexes and dictionaries.

GDPR PATTERNS
REGULATED DATA CLASSIFICATION

GDPR Patterns automatically identifies and classifies that falls under the EU General Data Protection Regulation (GDPR).

DATA CLASSIFICATION LABELS
AUTOMATED CLASSIFICATION TAGS

Data Classification Labels automatically applies classification labels and encryption based on existing labelling policy and reports on mislabeled files.

DATAPRIVILEGE
DATA ACCESS GOVERNANCE

DataPrivilege gives business users the power to review and manage permissions, groups, and access certification, while automatically enforcing business rules.

DATANSWERS
ENTERPRISE SEARCH AND DISCOVERY

DatAnswers analyzes content, file system activity, permissions and other metadata to provide relevant search results.
