Product Description

Oracle ERP Cloud is an enterprise resource planning suite delivered via a software-as-a-service (SaaS) model. Organizations use Oracle ERP Cloud to automate and manage day-to-day business activities such as accounting, procurement, project management, risk management and compliance, and supply chain transactions. The suite ties together a multitude of business processes and enables the flow of data between them, automating repetitive and manual tasks, and enabling more powerful insights and analytics across financials, projects, risk management, and other business processes. These analytics are designed to help users to make informed decisions around their financial, procurement, project and risk management functions.

Oracle ERP Cloud is organized into a suite of products tailored to various business needs common to most or all enterprises. The suite covers:

- Financial transactions and processes
- Accounting needs
- Procurement processes
- Project management, administration, and collaboration
- Risk management

ERP is often complemented by enterprise performance management (Oracle EPM Cloud), which covers areas such as financial consolidation and close, planning and budgeting, narrative reporting, tax reporting, forecasting and scenario modelling. By providing such a wide range of functions, the suite aims to provide a centralised platform to connect and support enterprise business processes, data, and decision-making.

Oracle ERP Cloud stands out as a SaaS option for users migrating away from on-premise ERP solutions. By transitioning to a SaaS model, companies no longer have the burden of maintaining, upgrading, and securing their own on-premise software, and they receive software updates from Oracle on a quarterly basis—ensuring that they always have access to the latest advances in new technologies (AI, machine learning, etc.).

Product Features

Oracle ERP Cloud suite includes products that align with key functional areas, as well as capabilities that can be used across the suite, such as reporting, analytics and integrations. Products and features in the ERP Cloud suite include:

- **Financials**: Oracle Financials offers companies a comprehensive set of tools for accounting, period close, AR and AP management, revenue management, expense management and financial analytics and reporting. It also delivers a foundation for finance processes with enterprise-wide accounting through the Accounting Hub tool. A recent new release includes joint venture accounting management.
- **Project Management**: Oracle Project Management provides a comprehensive set of capabilities for managing projects across the enterprise. It provides one solution for all project-related roles including project managers, team members, resource managers and financial roles. It includes tools for planning and forecasting, cost management, billing and revenue, execution management, task management, resource management and grants management. Originally sold as a separate product, Project Management now comes bundled together with Financials.
- **Procurement**: Oracle Procurement supports activities across the procurement cycle. These include supplier base management, payment processes, contract and compliance management, and streamlining sourcing efforts. By unifying the entire procurement process, it provides more visibility into spend and supplier risk. As part of the larger Oracle Cloud suite of applications, the Procurement product also integrates natively with Oracle Supply Chain Management (SCM) Cloud.
- **Risk Management**: Oracle Risk Management uses AI to automate the monitoring of user access and activity, such as configuration changes and transactions, to protect data and secure financials. It also provides streamlined audit, compliance and risk management workflow to help enterprises engage process owners in recognizing and managing risk within their own domains.

Oracle ERP Cloud also includes features found across products, such as:

- **Integrations**: Oracle ERP Cloud is part of the larger suite of Oracle Cloud applications, which spans finance, HR, supply chain, marketing and sales. These applications share a single data model and are built to perform together as one suite, orchestrating business processes across the entire organisation. This structure is designed to provide a cohesive view of the business with a consistent set of data for insight and analysis.
- **Oracle Cloud Infrastructure**: Oracle Cloud applications, including ERP, run on Oracle's Gen 2 infrastructure and are designed to provide consistent high performance and unmatched governance and security controls. This offering includes database, middleware and developer tools (PaaS) so users can build their own extensions to Oracle ERP Cloud, adding functionality without changes to the underlying code.

- **Reporting and Analytics**: By centralizing financial data, Oracle ERP Cloud presents deeper and more comprehensive analytics and insights to support decision-making. In addition, users can (and often do) complement ERP with Oracle EPM Cloud to help manage enterprise performance, and Analytics Cloud to gather and visualise insights across all lines of business.

Oracle ERP Expertise

Whether you are looking to implement a new cloud solution, to upgrade your on-premises Oracle ERP application, or need on-going help and support, Qubix can help.

Oracle EPM Cloud

We were the first Oracle partner globally to deploy Oracle Planning & Budgeting Cloud Service (PBCS). We are a global leader with Oracle Cloud EPM. We can help with new deployments, optimizations and managed services.

Oracle Analytics

Whether you want to re-energize an on-premises Oracle Business Intelligence application or deploy a new cloud analytics platform, Qubix has the proven experience and deep expertise to help.

ORACLE ENTERPRISE PERFORMANCE MANAGEMENT

Planning, Budgeting & Forecasting

Transform Planning Budgeting and Forecasting across your organization.

Financial Consolidation & Close

Increase control, reduce risk and accelerate time to close.

Account Reconciliation

Automate, standardize and control your accounts reconciliation process.

Narrative Reporting

Streamline internal and external narrative reporting processes.

ORACLE ENTERPRISE ANALYTICS

Analytics Cloud Platform

Leverage visualizations, self-learning analytics and enterprise reporting to scale insights in your data.

Autonomous Warehouse

Enterprise-scale high-performance, autonomous data warehouse solutions.

ORACLE ENTERPRISE RESOURCE PLANNING

Financials

Digitize your core financial processes with a modern financial management solution.

Human Capital Management

Ensure employees are engaged and help them be more strategic and productive in their work.

QUBIX DATA POINTS

Did you know?

- Qubix was founded in 1987.
- We are an Oracle only global Platinum Partner.
- We have 134 Oracle expertise certifications.
- We have completed 1,000+ successful Oracle related client engagements.
- We are multi-pillar and sell Oracle ERP, EPM, Analytics and Autonomous solutions.
- We support these successful deployments with a 24/5 global managed services capability.
- Qubix Cloudbridge is certified: Powered by Autonomous.
- We have offices in the USA, UK, Europe and Asia Pacific.
- We have a terrific clients case study page you can visit here.
