beSECURE Cloud Vulnerability Assessment and Management Solution

Automated Tools to Detect Vulnerabilities from any device with an IP or Web Application

New network and application vulnerabilities are constantly emerging. Operating teams often do not have the resources or time to address them, or the tools to provide visibility and control of these vulnerabilities. All companies, large and medium-sized, must comply quickly with these associated risks and standards.

Primenet is proud to partner with Beyond Security, to provide solutions for detecting and managing vulnerabilities and accurately assessing weaknesses in network infrastructure, servers, workstations, databases and web applications as well as industrial control systems.

These technologically advanced solutions enable you to continuously analyze all your networks equipment and custom web applications in your network, Cloud P cloud or Cloud Public.

Key Features:

1. Identifies vulnerabilities on Layer 2-7
2. Database showing exact vulnerability detected, vulnerability location and possible solution
3. Set up customized scan schedules. New tests added daily
4. Single, centralized management console to manage all your organizations easily
5. Automatically generate reports sent to internal and/or external contacts
6. Standalone device, no software to install
7. Competitive and non intrusive alternative compared to penetration testing
8. Ability to scan up to 2 IP addresses/FQDNs
8. Compliance certificate according to local and international regulation
8. Differential report generator easily displaying remediate vulnerabilities and new vulnerabilities

beSECURE Cloud Vulnerability Assessment and Management Solution

Assessment Tool for Every Stage

Simply Building a Secure Infrastructure From the Ground Up.

beSECURE

- Make sure your network is really Safe. Used by MSPs, SOCs, IT and Security Managers
- Tests Network and Custom web-applications
- Automatically and continually scan for discovered systems and vulnerabilities - 300-350 vuln/month
- Behavior analysis with Accuracy (less than .01% false positive rate)
- Network Mapping and integrated step by step remediation workflows

beSTORM

- IoT, Critical Infrastructure, Automotive, Lab Certification, R&D / QA testing
- Dynamically assess software, hardware and proprietary protocols for UNknown flaws.
- Near-infinite attack vectors allow teams to detect flaws before they are exploited.
- Build your own proprietary protocol testing, or use the beSTORM self-learning module
- Select exhaustive testing for every field of your protocol. Certification reporting
- Step back and forth in time, and export your Proof of Concept exploit

beSOURCE

- Static Analysis, Code testing and remediation for software developers.
- DEVOPs: Secure applications in development
- Accurate and easy to follow remedation steps
- Reduce QA cycles in development
- Share development project with members of your team

beSECURE Cloud Vulnerability Assessment and Management Solution

Automated Vulnerability Detection System
The beSECURE solution detects vulnerabilities on your network and webapps. beSECURE identifies security vulnerabilities and lists their exact location and description. Every vulnerability detected by beSECURE is also provided an easy to understand remediation step

With each analysis, beSECURE automatically searches for new equipment and services and adds them to the inspection program. It then checks each active node based on its characteristics and records responses to create network security baseline data. beSECURE then generates the knowledge base of the network and its trending over operating time.

beSECURE is able to scan IP addresses automatically, with ad hoc scans or scheduled scans configured to your specific time requirements.

Cyber Security Solution
beSECURE was designed to provide quick analysis allowing a security administrator to quickly focus vulnerability detection, without having to manage an operating system or a suite of separate tools.

- Simple configuration
- Autonomous device, not requiring integration with existing hardware
- Agent less or with agent
- Operating system of the device protected from attack

beSECURE Managed Service Introduction
Components
- Scanning from 1 IP/hostname to 2M IPs / hostnames.
- Tests for both internal and Internet facing systems

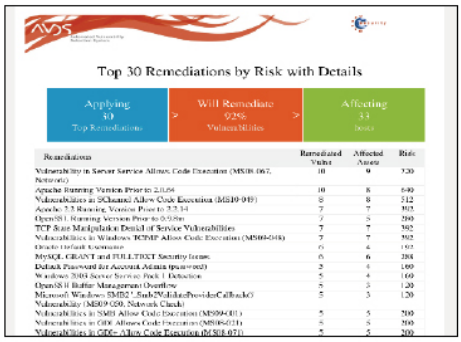
Information Server – IS
The management server - controls and manages your entire network through its' web interface GUI

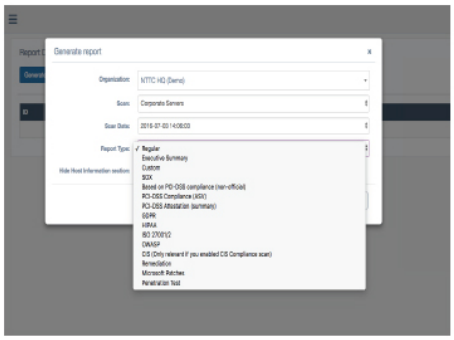
Local Scanning Server - LSS
Scanning Engine, plug&play. Up to 2500 hosts a day.

beSECURE Cloud Vulnerability Assessment and Management Solution

Advantages

- Highest reporting accuracy - .01% false positive rate - “behavior analysis »
- Integrated custom web-application module
- Plug and Play setup
- Scans all levels (network, database, application)
- Turnkey solution with centralized management console
- Hosted or On-Premises deployments
- No data leaves your organisation
- Compliancy Reports such as (CIS, ISO27001, PCI DSS, and more..)
- Supports full integration with any 3rd part tool (SIEM, ticketing, PM, and more..)
- Maps and Scores your network for strategic



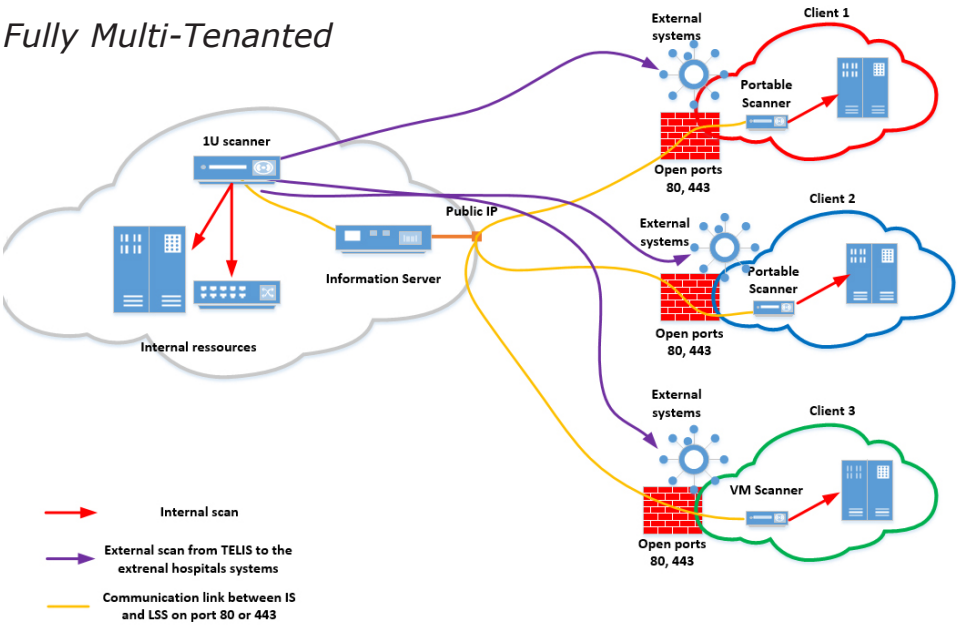


beSECURE Cloud Vulnerability Assessment and Management Solution

SOC Solution/Managed Services

Below are the 3 solutions that we offer.

Fully Multi-Tenanted



Primenet deployment and ongoing managed support

We offer Cloud Vulnerabilty Assessment and Management Solutions for as little as **£9.99 per IP per month**. Our fully trained Primenet engineers, have the knowledge and experience to fully manage and maintain your beSECURE deployment.

Visit our website **primenetuk.com** for more information or contact us today at **sales@primenetuk.com** or on **02033843916**

About Primenet

Founded in 1998, and based in Stevenage & London, Primenet is proud to be one of the most innovative providers of services and infrastructure solutions globally. As a Managed Services Provider, we currently manage and maintain systems for over 170 clients including environments built on Dell/EMC/HPE/AWS/Microsoft Cloud Technology. Whatever your IT requirements, from cyber security, to cloud desktops and IT support, we have a personalised solution to benefit your business.

Unit 8, Arlington Business Park,
Whittle Way, Stevenage SG1 2FS
