Additional Products

Enterprise Installed System

This is the same software package as the Enterprise Hosted Service, but installed on customers own servers. It is suitable for customers who wish to control the environment on which their survey system is hosted and response data collected. The parameters shown above for the hosted service are the same for the installed system, including the price. The

only difference is the removal of the number of survey responses limit, meaning that additional responses will never need to be purchased.

Enterprise Hosted Service on a Private Cloud Server

This is the same software package as the Enterprise Hosted Service, but hosted on a private cloud server. Prices cannot be quoted as they will vary depending on the private cloud server specification required, so please get in touch for a quote.

Notes

All pricing is exclusive of VAT.

‘Unlimited’ is subject to reasonable use
